

## Petzl's VOLT® Fall Arrest and Work Positioning Harness

The fall arrest and work positioning VOLT harness is very easily donned thanks to its EASYFIT design: a vest ensures the harness keeps its shape and the FAST automatic buckles on the waist belt and leg loops allow the harness to be donned with both feet on the ground. The VOLT harness' anatomical design and wide, semi-rigid waist belt ensure comfort throughout the day. Its Ladder Climb attachment point allows for ventral attachment of the fall-arrest trolley, thus ensuring optimal comfort during progression.

Product Testimonial written by Aaron Pitts, P&D Antenna, IL

“During the last National Association of Tower Erectors (NATE) annual conference, Petzl showcased the new VOLT fall arrest and work positioning harness for the vertical work industry.

I donned the harness at the show and was instantly surprised by the feel and its lightness. I noticed the VOLT is extremely easy to get in to and the buckles are simple to manipulate.

In addition, once on, the straps of the harness were a cinch to adjust. At the time of the NATE conference, the VOLT was only designed in accordance with European standards, but is now available following the new ANSI/ISEA Z359 US standards.

As a result of passing the show test, it was time to take it into the field. The first evaluation unit we received from Petzl was given to a senior climber and never returned because of how much he enjoyed it. This particular individual noted how much less stress he felt on his body when he positioned in the optional seat versus his previous harness.

It is unlikely that everyone would ever be partial to the same harness, but the VOLT has had a great deal of positive feedback within our organization.

Crew members have mentioned their appreciation for the places to park lanyards when not in use and how light it is. Some users that once used a spreader bar for positioning no longer need to carry the extra weight because of the length and separation of the seat straps. The VOLT harness also integrates nicely with the associated tool bags which are available in small and large.”
