

## Are Breaking Tri-Band Mobile Antennas Causing you Frustration Pulse Larsen Antennas - NMO150/450/758

### NMO150/450/758

Pulse Larsen designed their new tri-band mobile antenna (p/n NMO150/450/758) thoughtfully and thoroughly, with all of the needs and concerns of those in the public safety sphere in mind. This tri-band mobile antenna is impact resistant, is only 16.5 inches long, and has a spring just inches from the base that greatly increases flexibility and minimizes damage.

This antenna is small and aesthetically pleasing. The NMO150/450/758 is shorter and smaller, with a sleek base. It has high performance. This antenna covers low (VHF), middle (UHF), and high (7/800 MHz) frequencies, giving vehicle fleets the range they need to communicate reliably and consistently. At the same time, it sacrifices only a small amount of performance so that it can remain small and rugged. Plus this antenna is economical. Our tri-band antenna is significantly less expensive, making it a smart choice for budget-minded departments and public safety organizations.

For more information on the NMO150/450/758 email primus at [support@primuselectronics.com](mailto:support@primuselectronics.com) or call us at 800-435-1636.
